Energus

Auditorium Upgrade with audience camera tracking at Energus

“The new Auditorium facilities will place Energus at the forefront of the post-pandemic events industry.”

Faye Brown, Business Development & Marketing Lead, Energus

Challenge

As a centre of excellence for education and training, Energus had to find its way to a sustainable post-COVID-19 future. With events and conferences on hold during the pandemic, the team at Energus launched a refurbishment of their 204-seat auditorium. The update was designed in partnership with audio visual integrator Pure AV, the company challenged to provide the latest presentation, streaming and conferencing technologies. The Auditorium needed to become a venue capable of in-person, virtual and hybrid events and ready to meet the demands of the post-COVID-19 events sector.

Solution

The Auditorium stands out through a 4.3m by 2.4m LED video wall, which is complemented by a fully controllable ambient lighting system and immersive 5.1 surround sound. The Auditorium features a fully touchless audience microphone system. Seven Sennheiser TeamConnect Ceiling 2 microphones provide complete coverage of the space, enabling audience members to participate without handling a mic.
