

CUSTOMER SUCCESS STORY

Christian-Albrecht University of Kiel

During big events, conferences and lectures ...

Challenge

The AV responsables of the University of Kiel went looking for a system to transmit audio signals from one lecture theatre to another. Another aim was to use the new system to remove barriers for students and guests with a hearing disability.

Solution

The University of Kiel opted for Sennheiser's MobileConnect system. It is easy to integrate into the existing Wifi and comes with an app that students can use on their own mobile device to receive the audio signal via headphones, their hearing aids or cochlea implants.

“We were all amazed by the app. It is completely intuitive in its use and allows everyone to adapt the sound to their personal needs.”

Stefan Paeth, Specialist for event technology
