

CUSTOMER SUCCESS STORY

IHK Hannover (PIK AG)

Challenge

IHK Hannover's new office complex required the integration of advanced audio solutions that could meet the high standards set for the building's design and functionality. IHK Hannover needed a microphone solution that was not only technologically superior but also aesthetically pleasing to complement the modern environment of the conference rooms. Additionally, the integration of these audio solutions into the existing QSC system posed a significant technical challenge, requiring seamless compatibility and up-to-date firmware from start to finish.

Solution

To meet these requirements, integrator PIK AG selected Sennheiser's TeamConnect Ceiling Medium (TCC M) microphones. Despite being a new product at the time of selection, the decision was driven by Sennheiser's established reputation for quality and the TCC M's compact and attractive design. The microphones were chosen for their simple wiring and ability to blend seamlessly into the conference room environments.
