

## CUSTOMER SUCCESS STORY

# University of Central Florida

### Challenge

The University of Central Florida aimed to enhance its large conference rooms with a robust audio solution that could support advanced speaker tracking technology. A key requirement was to incorporate a microphone system that offered both Dante and analog connectivity, ensuring compatibility with existing systems. Additionally, the ease of use of the Control Cockpit software was essential for seamless operation, coupled with reliable communication with Sennheiser's support team.

### Solution

The university chose Sennheiser's TeamConnect Ceiling 2 microphones as the first product from their business portfolio. The feature-rich system was ideal for UCF's long-term strategy, providing high-quality audio capture while integrating easily with the Crestron Automate VX platform for advanced speaker tracking.
