

CUSTOMER SUCCESS STORY

The British Academy

Challenge

A historic Georgian building housing the British Academy required a modern audio solution that preserved the venue’s architectural character while delivering clear speech intelligibility and immersive sound for lectures, conferences and events.

Solution

Sennheiser designed and installed a bespoke audio system combining discrete ceiling and boundary microphones, Dante-enabled signal distribution, and high-performance loudspeakers tuned for the room acoustics. The system integrates with the Academy’s AV control and streaming workflows to support hybrid events and effortless operator control.

Fact Sheet

Products Installed	TeamConnect Ceiling 2, TeamConnect Ceiling Medium, MobileConnect
Country	UK
Integrator	CSL Integration, Recursive Digital AV Consultants
Reason for choosing	Reliability, ease of use, ability to blend into the historic building décor.
